## Handling Duplicate Items

If a batch has duplicate items, you can view a report that shows why an item was determined to be a duplicate and when the “original” was presented to the system. To detect duplicates, the system compares the MICR line, including the Routing Number, Account Number, and Check Number. In addition, the **Transaction Number** field value may cause an item to be rejected as a duplicate. This value should *not* be entered manually since the system automatically generates a unique number. The EPS duplicate table is 75 days.

1. To view the report, go to the **Reports** tab, and select the report titled *Show Items Detected as Duplicate Transactions*.
2. Select your location and your date range, and then click **Show Items Detected as Duplicate Transactions**. In the *Reason for Duplicate* column, you will see why the item was called a duplicate. To see the details of the original transaction, choose the value in the *Original Reference Number* column.

Detected Date Time	Reason For Duplicate	Disp. Acct Number	Check #	Transaction Amount	Original Trans. Date Time
06/30/2017 10:43:17 AM CT	Routing/Account/Check Num...	0654	12350	\$85.00	06/12/2017 09:56:36 AM CT
